(54) Title: METHOD OF ENABLING THE PROGRAMMING OF A UNIVERSAL REMOTE CONTROL SYSTEM

(57) Abstract: A method of enabling the programming of universal remote control system for controlling a CE device of a combination type providing a combination of functionalities equivalent to that provided by a combination of devices with respective basic features, the CE device including an interface for receiving remote control signals to access the combination of functionalities, wherein the combination of functionalities determines possible operational states of the CE device, includes providing input data for a configuration process for generating program code enabling the remote control system to provide remote control signals controlling transitions between the possible states. The input data is assembled by a data processing system in accordance with information defining the combination of devices with basic features received through an interface to the data processing system.
